

Reading joint states with an MQTT client from a Mosquitto MQTT broker

Install an MQTT Client

1. Install a mosquitto  client for example [MQTTX](#)

Connect to the WIFI

Connect to the same WI-FI the MQTT-Broker is in.

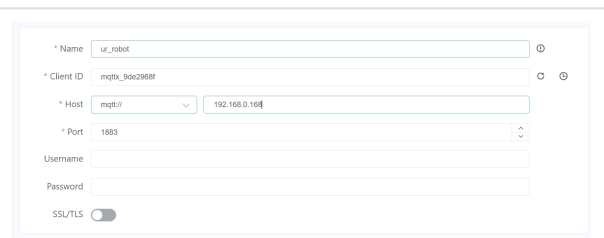

In our case the WI-FI's name is '**ROOM_240**'

In our case the device running the broker is an RaspberryPi  with the IP **192.168.0.168**

Subscribe to a topic via your MQTT client

1. Setup a new connection by clicking  :

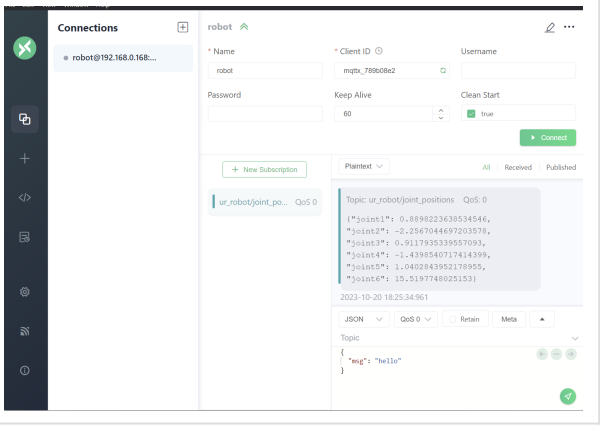

Setup a new connection to a "broker" in our case this is the Raspberry Pi  connected to the Robot. Provide a name and leave the username and password fields blank.

The screenshot shows a form for setting up a new MQTT connection. The fields are as follows:

Field	Value
Name	ur_robot
Client ID	mqtt_9dc2969f
Host	mqtt:// 192.168.0.168
Port	1883
Username	
Password	
SSL/TLS	<input type="checkbox"/>

Click on "connect" and you'll see the joint positions coming in and constantly updated!
